History of Annual Commercial Forest Production in Nova Scotia (Sawn, Round, Hardwood, Softwood and Total, in Cubic Feet, Solid Wood)	

* The title was changed from N.S. Forest Products Directory to N.S. Forest Production Survey to avoid confusion with any publications from the Nova Scotia Forest Products Association.

SUMMARY

This is a report of forest production in Nova Scotia for the Calendar year 1985, based on data collected by the Operations Branch of the Department of Lands and Forests. Compiling, editing, publishing and distribution were done by the Program Planning Branch.

The information was collected from producers, processors and buyers of primary forest products. Sawmill firms reported the quantities sawn during the calendar year 1985, whether the wood was purchased, custom-sawn or produced by the mill owners themselves. Roundwood production was obtained from buyers and producers of pulpwood, pit-props, veneer logs and poles and piling. Pit props are included with poles and pilings for aggregation reasons.

Production data are concerned only with wood of Nova Scotia origin.

Production is shown as accurately as possible by county of origin. Resawn volumes are omitted to eliminate duplication of data.

The total commercial production, at roundwood level, amounted to 111,027,580 cu.ft. (3 143 948 m³), solid wood equivalent, down 6% from 1984. Sawlog volume decreased by 4% from 1984, amounting to 33,699,017 cu.ft. (954 249 m³) equivalent. Round products decreased 4% to 2 189 699 m³ equivalent.

Production of pulp chips from sawmills decreased by 45% from 1984.

Compared to 1984, increases were reported for hardwood lumber, mine packs and laths. Decreases occurred in softwood lumber, pulpwood, pulp chips, railway ties, pit props, shingles, staves & headings and boxwood.

The pulp and paper segment of the industry is composed of five mills: a kraft pulpmill at Abercrombie Point; a sulphite pulpmill and newsprint mill at Point Tupper; a newsprint mill at Brooklyn; a paperboard mill at Hantsport and a hardboard plant at East River.

The total number of firms operating all types of sawmills decreased from 407 in 1984 to 406 in 1985.

The number of firms producing over one million board feet during 1985 was 43, two less than in 1984. There were 317 firms producing less than one million board feet per firm, compared to 316 in 1984.

Of the smaller producers, 235 produced 100 Mfbm or less in 1985.

Firms producing over one million board feet per firm accounted for 13% of the number of firms and produced 85% of the lumber and boxwood.

As in previous years fuelwood, whether in sawmill chip form or stacked, is not reported. Since 1983 whole tree chips have been reported, however, they are for all species and all diameters and are not included in any summary figures.

See "List of Sawmill Owners and Materials Produced - 1985" for further information.

Production statistics by ownership class are included in this publication. Provincial Crown production was obtained from records kept by Department of Lands and Forests. Large Private owners provided data for private ownerships of over 1,000 acres (400 ha) per owner. Small Private ownership production was estimated by subtraction of Crown and Large Private production from the total provided by sawmill and roundwood producers.
